TRACE TROUBLE
TO FENCE WEEDS

Noxious Plants as Rule Are Result of Neglect Because of Other Pressing Work.

RIGHT METHODS OF CONTROL

Biennials May Be Destroyed by Plowing Twice a Year—Perennials Can Be Killed by Applying Waste Oil.

(Prepared by the United States Department of Agriculture.)

"I've too much work to spend time cleaning fence corners," declared a farmer when his neighbor asked why he allowed weeds to grow on the fences and the roadside.

"For instance?" observed his caller who had the New England habit of answering one question by asking another.

"For instance, there's weeds all through my corn and potatoes, and they've been getting into the oats till this year's thrashing will be half Canadian thistles. And, for instance, the hired man's been laid up with ivy poisoning he took fixing up the pasture fence where some rails had rotted out. And, for instance, just now there's some city acquaintances of my daughter coming out, and they might possibly buy the place if we could get it tidied up—and there's a big crop of fall weeds in the front lot. I guess that's enough, for instance, to keep me from putting around the fence corners with a grasshook after weeds."

How the Weeds Spread.

"Yes, maybe, looking at it from one angle," persisted the neighbor. "But, then, consider. With balloon-seeds

Weeds Along Fence Rows Spread Seed to Land Adjoining.

Like Canada thistle, dandelions, wild lettuce and milkweed; bur-seeds like burdock and beggar's lice, sticking to every passing man and animal; the scatter-seeds like tumble; and seeds that are scattered by birds—do you suppose those fence-corner weeds will remain in the fence corners? Don't you imagine that they have something to do with the fouling of your crop fields, and of that front lot that you are so anxious to have look neat for prospective purchasers? And don't you imagine that they foul my fields as well as yours? I noticed a little clump of wild lettuce in one angle of the fence; and do you know that one wild lettuce stalk yields from 8,000 to 240,000 seeds in one season—enough to infest several acres of land?

"Your hired man's case of poisoning is costing you practically a week's time, just when you can't afford it."

CHESTNUT TREES FOR POLES

Selection Is More Carefully Made than Average Person Thinks—Defects Looked For.

Not every tall chestnut tree is worthy of becoming a telephone pole—the selection of poles is more carefully made than the average person thinks. Chestnut and eastern white cedar furnish the bulk of the eastern pole timber. Specifications for chestnut poles generally require material to be of good quality second-growth timber, of specified dimensions, butt cut, squared at both ends, reasonably straight, well proportioned from tip to butt, peeled and with knots trimmed close.

Defects looked for in inspection are crookedness, split tops and butts, sap and butt rot, checks and shakes. Poles are assigned to two or three classes, according to their length, top circumference and circumference measured at 6 feet from the butt. Poles of the 40-foot class, for example, are required by one representative pole company to be 24 inches in top cir-

And that was another case of line fence weeds.

"The importance of cleaning out weeds growing in waste places around the farm is not generally realized. They are frequently neglected under pressure of other work; but there is little work around a farm that pays better than keeping the weeds out of farmyards, barnyards and fence rows, and I am selfish and I can't keep my fields clean as long as you leave your side of the line fence foul."

Many common fence-row weeds are annuals and biennials, and, the United States Department of Agriculture points out, they can be killed by mowing twice a year, but the location is one that might better be kept clear of all vegetation than grown up to weeds; and perennials, like Canada thistles, can be killed out in these spots.

How to Deal With Weeds.

An economical way of dealing with perennials is to saturate them with waste oils from automobiles and tractors. The disposal of this oil is in itself often a problem. It is well to cut the weeds first, apply the oil and cover the ground with clean dirt for appearance's sake. Oil will make the ground sterile and bare for several years. It is less drastic to cover the ground with tar paper, old tin, or loose boards, or to apply dry agricultural salt at the rate of one pound per square foot.

On the whole, fence row and waste place weeds are the result of neglect. A little well-directed energy will keep them under control. A common saying is that a weed-free farm is the sign of a good farmer. It is a mark of distinction that can only be attained by keeping constantly at the waste places.

REMOVE TRASH FROM
GARDENS IN AUTUMN

Vines, Stalks and Other Rubbish Should Be Cleaned Up.

After Crops Have Been Harvested Soil Improving Crop of Some Kind Should Be Planted if Available Area Is Sufficient.

(Prepared by the United States Department of Agriculture.)

When garden crops are harvested the vines, stalks, and other plant remains should be cleaned up, the United States Department of Agriculture points out. Good gardeners who take pride in the appearance of their gardens remove such trash, as, if allowed to remain, it harbors insects and diseases liable to attack next year's crops. Plant remains from vegetable crops should not be composted for use on the same crops next year, but may be burned and the ashes left on the soil or used on other land devoted to different crops.

Where a sufficient area is available so that part can be devoted to soil improving crops each year, these should be put in as the vegetable crops are harvested. Crimson clover is an excellent soil improver, but can not be grown in all sections. Winter oats, barley, rye, vetch, and combinations of these are good. Where the same area is used for the garden year after year a fall application of manure is very desirable. If manure can not be secured, it may pay to sow the garden to one of the soil-improving crops. In many sections there is time between late fall and early spring vegetables for a good growth of these crops.

Better Than Hired Man.

A hive of bees beats the best hired man you ever saw. It will work for you when your back is turned, and while you sleep.

Destroy All Weeds.

Destroy all weeds on the place. One weed may scatter thousands of seed which soon produce plants.

DARLING BABY
BRIGHTENS HOME

Children's Laughter a Pleasing Sound

Altoona, Pa.—"I am writing to tell you what Lydia E. Pinkham's Vegetable Compound has done for me. We had six children die almost at birth. From one hour to nineteen days is all they have lived. Before my next one was born I took a dozen bottles of your Vegetable Compound, and I can say that it is the greatest medicine on earth, for this baby is now four months old, and a healthier baby you would not want. I am sending you a picture of her. Everybody says 'That is a very healthy looking baby.' You have my consent to show these few lines to anybody."—Mrs. C. W. BENZ, 131 8th Avenue, Altoona, Pa.

Mrs. Janssen's experience of interest to childless wives.

Millston, Wis.—"I want to give you a word of praise for your wonderful medicine. We are fond of children, and for a considerable time after we were married I feared I would not have any. I began taking Lydia E. Pinkham's Vegetable Compound, and it strengthened me so I now have a nice, strong, healthy baby girl. I suffered very little at childbirth, and I give all the credit to your medicine, and shall always recommend it highly."—Mrs. H. H. JANSSEN, Millston, Wis.

Mrs. Held of Marinette, Wis., adds her testimonial for Lydia E. Pinkham's Vegetable Compound. She says:

Marinette, Wis.—"I was in a nervous condition and very irregular. My doctor advised an operation. My husband brought me one of your booklets and asked me to try Lydia E. Pinkham's Vegetable Compound. It overcame my weakness so that I now have a healthy baby girl after having been married nine years. I am glad to recommend your medicine, and you may use my letter as a testimonial."—Mrs. H. B. HELD, 830 Jefferson St., Marinette, Wis.

There are many, many such homes that were once childless, and are now blessed with healthy, happy children because Lydia E. Pinkham's Vegetable Compound has restored the mother to a strong and healthy condition, as it acts as a natural restorative for ailments as indicated by backache, irregularities, displacements, weakness and nervousness.

Women everywhere should remember that most of the commoner ailments of women are not the surgical ones—they are not caused by serious displacements or growths, although the symptoms may be the same, and that is why so many apparently serious ailments readily yield to Lydia E. Pinkham's Vegetable Compound, as it acts as a natural restorative. It can be taken with perfect safety and often prevents serious troubles.

Therefore if you know of any woman who is suffering and has been unable to secure relief and is regretfully looking forward to a childless old age, ask her to try Lydia E. Pinkham's Vegetable Compound, as it has brought health and happiness into so many homes once darkened by illness and despair.

Lydia E. Pinkham's Private Text-Book upon "Allments Peculiar to Women" will be sent to you free upon request. Write to The Lydia E. Pinkham Medicine Co., Lynn, Massachusetts. This book contains valuable information.
